

Feature Selection Workshop

1. In this workshop, we shall perform Feature Selection using Pearson Correlation.
2. Please use the dataset **wine.csv** for the questions that follow.
3. Plot the **pairwise** relationships of the dataset, using the *pairplot()* function in Seaborn.
4. Generate the Pearson Correlation Matrix for the dataset
5. Plot a **heat map** from the generated correlation matrix, using the *heatmap()* function in Seaborn.
6. Perform Feature Selection to determine the best features in our dataset.
